BEAUTIFUL PRODUCTS that last a lifetime

Cover: Architec Smooth, Alabaster
BEAUTIFUL PRODUCTS

that last a lifetime

Our range of coloured, standard and premium masonry has set a new standard in quality and style for the versatile concrete block.

By adding oxides and coloured sands to our mix of raw materials, we produce blocks with contemporary colours, textures and appeal. Ideal for a range of projects from a modern beach residence to impressive commercial projects, Austral Masonry has an array of products to suit your style.

Austral Masonry blends fine sand, cement, aggregate and quality colouring agents to produce unique coloured blocks. Having long been the workhorse of the construction industry, our products are frequently specified in cutting-edge residential and commercial designs due to their strength and versatility.

Austral Masonry is part of the Brickworks Building Products Group, one of Australia’s largest building products companies, with a stable of leading brands dedicated to manufacturing innovative products for Australians and the world for over 100 years.

As part of this group, our current products include masonry blocks, retaining wall blocks, bricks, pavers, precast concrete panels, concrete and terracotta roof tiles, timber products, terracotta façade systems and specialised building systems.

Style inspired by design
When considering building products to use on your project it's important to understand all the pros and cons before making your final selections. But with concrete masonry products you know you're making the right choice when you consider the host of benefits they offer including: sound insulation, thermal mass, minimal environmental impact, colours and finishes, reduced ongoing maintenance and many more. See the list of benefits below so you can build in confidence with concrete masonry.

**Sound insulation**
Due to their mass, concrete masonry blocks out noise better than traditional building materials, resulting in a quieter home environment.

**Range of colours and finishes**
Concrete masonry products are available in a range of over 78 colour and finish combinations. This offers you a wide range of products to choose from to suit the style of your home.

**Thermal mass**
Due to their mass, concrete masonry products slow the transfer of external temperature fluctuations into internal living areas thereby reducing the need for artificial heating and cooling devices.

**Affordable**
When comparing other products on the market, concrete masonry is an affordable option. This is especially true when considering the complete building system as concrete masonry can reduce or negate the need for accessory products such as sarking and insulation.

**Low maintenance**
When you build with concrete masonry products you are building with a material that requires minimal maintenance and upkeep so you have more time for the important things in life.

**Fire resistant**
Concrete masonry products are made from non-combustible materials so they are fire resistant and therefore ideal for bushfire prone areas.

**Weather resistant**
Exterior Walls that will hold up to heavy storms, U.V. degradation, blistering heat, and sub-zero temperatures.

**Termite resistant**
Masonry walls won't be degraded by termites as there’s no wood for the termites to eat.

**Lower energy costs**
Concrete masonry products are high thermal mass products which slow the transfer of temperature fluctuations from the outside into internal living areas. This reduces the need for use of artificial heating and cooling devices and thereby reduces associated energy costs.

**Low environmental impact**
Masonry product production has minimal impact on the environment because they do not deplete precious natural and limited resources like many other materials. Concrete masonry products are cured in temperature controlled kilns with comparatively little energy used compared to kiln fired products.

**Impact resistance**
Because masonry products are made from concrete they are strong and durable which means that they can endure significant impact from external forces with minimal if any impact.

**Speed of construction**
Concrete masonry products are much faster to build with than some commonly used walling materials and have the added benefit of being both structural and aesthetic.
Finishes Guide

The Architec Range is available in a range of finishes to suit your style and project.

**Shot Blast**
This process subtly exposes the aggregates, producing a weathered, stone-like finish.
Available in: Architec Shot Blast

**Split face**
The splitting process used to create these blocks produces a bold textured exposed aggregate finish.
Available in: Architec Split Face

**Smooth**
A finely textured finish created through the standard moulding process.
Available in: Architec Smooth

**Honed**
The honing process grinds 2-3mm from the block surface producing a matte exposed aggregate finish.
Available in: Architec Honed

**Polished**
The matte finish from the honing process is polished until the aggregate reaches a high gloss finish.
Available in: Architec Polished

Range of Sizes

The Architec Range is available in a range of sizes to suit various applications.

Each series noted below relates to the blocks thickness (so a 100 Series block is 100mm thick in application).

- **100mm Half Height Series***
- **100mm Series**
- **150mm Series***
- **200mm Series**

*Made to Order - minimum order quantities apply.
See the lustrous finish of Architec Polished.

The polishing process reveals the aggregate used in the blocks composition, giving them a lustrous finish.
Alabaster Charcoal Almond Pearl Grey

Above: Architecture Polished Charcoal
Embrace the elegance of this block as its subtle sparkle of natural aggregate shines through.

The honing process grinds 2-3mm from the block surface, producing a matt exposed-aggregate finish.
Above: Architec Honed Pearl Grey
ARCHITEC SPLIT FACE

*bold, textured finish*

The rustic finish of split face creates a distinctive look.

The splitting process used to create these blocks produces a bold textured, exposed aggregate finish.

ARCHITEC SHOT BLAST

*subtle texture*

Experience the subtle texture of Architec Shot Blast.

This process subtly exposes the aggregates, producing a weathered, stone-like finish.
Create a smooth and subtle finish with Architec Smooth. Its smooth surface gives a soft glow to any project. Offering contemporary colours from Alabaster to Pearl Grey, there’s an option to suit most colour schemes.

Architec Smooth, Shot Blast, Honed, and Polished

One cubic metre of mortar will lay approximately 800 to 1200 200 series blocks.

One 20kg bag of Off-White cement and oxide# 100kg clean sand.

This yields 0.08 cubic metres and will lay 60 to 100 blocks.

Architec Split Face

For corner applications, these products are available with the face and one end Honed, Shot-Blast or Polished, with the exception of capping.

Please note.

190mm Split Face product and 20.139 corner unit may vary somewhat in colour compared to other products. This is because these products are produced in a different production facility and use different materials in their manufacture. Austral Masonry recommends all customers see actual product samples prior to making final selections.

Architec Material Quantities

Material Quantities for Mortar

Notes

One cubic metre of mortar will lay approximately 800 to 1200 200 series blocks.

Masonry Units

Architec™ is manufactured in accordance with the provisions of Australian Standard AS/NZS4455:2008.

Mortar

Mortar mix options in AS3700 include cement; lime and sand in 1:1:6 proportions for M3 (general) and in 1:0.5:4.5 proportions for M4 (Exposure Grade). While these make better mortar, the adjacent mixes, without lime, are more common. The adjacent mixes are based on one 20kg bag per mix.

M3 Mortar Mix (general purpose)

One 20kg bag of Off-White cement and oxide# 100kg clean sand. (18 shovels @ 5.6kg) 0.1kg of Dynex or similar methyl cellulose plasticiser. This yields 0.08 cubic metres and will lay 60 to 100 Architec™ Blocks.

M4 Mortar Mix (exposure grade)

One 20kg of Off-White cement and oxide# 80kg clean sand. (14 shovels @ 5.7kg) 0.1kg of Dynex or similar methyl cellulose plasticiser. This yields 0.06 cubic metres and will lay 50 to 75 Architec™ Blocks.

Core Filling

When core filling Architec walls, some seepage may occur due to high hydrostatic pressure.

Ensure it is cleaned off before it dries, otherwise staining will occur. It is essential that the block work is kept clean from mortar smears. This will eliminate the need for aggressive acid based cleaning solutions which can damage the face or change the colour of the concrete blocks. Storey height walls should be filled in 2 lifts to reduce hydrostatic pressure.

Oxide quantities below are approximate and assume sand is near white. Trial batches should be made and assessed for colour-match for blocks when dry. Contrasting mortar colour is not recommended due to difficulty of cleaning smears.

Joints should be finished with an ironing rod to make them smooth, dense and more water resistant. (Mandatory in severe marine environments).

Raked joints are NOT permitted in hollow blocks (unless corefilled as per AS3700)
### General Notes

The dimensions noted on this page apply to smooth and shot blast finished products. Polished and Honed are 2mm thinner. Split Face units are 5mm thicker.

**Block Thickness**

Blocks are available in a series of five thicknesses:

- 100mm Series - 90mm total block thickness
- 120mm Series - 110mm total block thickness
- 150mm Series - 140mm total block thickness
- 200mm Series - 190mm total block thickness
- 300mm Series - 290mm total block thickness

**Block Types**

Blocks are manufactured to three levels of coring.

- Solid - a solid block with no core hole
- Cored - < 30% core hole volume
- Hollow - >30% core hole volume

**Fire and sound resistance**

Details are available on request from your local Austral Masonry Design Centre.

**Codes of practice**

Austral Masonry products are manufactured in accordance with the provisions of Australian Standard AS4445:2008 Masonry Units and Segmental Pavers. It is recommended that design, drawing practice and construction be carried out in accordance with AS 3700, Masonry Structures.

### Modular planning

The dimensions of masonry units are based on a 100mm module.

The actual size of units shown in this catalogue are generally 10mm smaller than their nominal size to allow for joint thickness. For example, a block having an actual length of 390mm will be classified as having a nominal length of 400mm.

**Block laying**

Dry units are essential. Blocks should never be wetted prior to the application of mortar. Blocks should be kept dry when stored on site before use. Whenever work is stopped, the tops of walls should be covered to prevent moisture entering the cores of the blocks. Blocks should be laid with the thickest shell uppermost. Care shall be taken not to allow mortar to drop into cores if it is to be grouted. A clean out course is recommended and usually specified.

**Jointing**

The mortar squeezed from the joints should be struck off flush with the wall as each block is laid. When the mortar has stiffened and is firm to the touch, it should be firmly compacted with a jointing tool. This compaction is important since mortar, when hardening, has a tendency to shrink slightly.

### Control joints

When required, control joints should be located:

- at major changes in wall height,
- at changes in wall thickness, other than for piers and buttresses,
- at control joints in footings, in the roof, and in floors,
- at chases and recesses for pipings, columns, fixtures, etc.
- at one or both sides of wall openings,
- near wall intersections.
- other than as above, unreinforced masonry should have control joints at 6m centres. 16m if adequately reinforced.

**Wall ties**

Wall ties for cavity walls should be provided in accordance with AS 3700.

**Bond beams**

A bond beam is a continuous beam around the exterior of a building for the purpose of providing lateral stability to the walls, and to minimise the possibility of shrinkage cracking at openings. Bond beam blocks should be filled with concrete or grout as specified and suitable reinforcing steel. Reinforcement should be not less than 12mm deformed bars.
Flash

In cavity walls, flashing shall be placed at an angle across the cavity to discharge moisture towards weep holes. Turn up ends to prevent moisture draining into cavities. Flashing and capping should be provided to the tops of all parapets.

Cleaning

Care should be taken during construction of masonry walls to prevent excess mortar being smeared over the faces of the blocks. Finished walls should be cleaned down after the mortar has hardened by rubbing with a piece of block or carborundum stone, wire brushing where necessary. Acid must not be used for cleaning concrete masonry walls.

Delivery

Delivering your blocks is the first step in the construction process. Here are a few simple guidelines to help with a smooth delivery.

• Deliver ahead of time, preferably at least a day before work commences. Please give us at least 48 hours notice for subsequent deliveries.

• Take as many blocks as you can in one delivery to ensure priority service and efficient on-site blending.

• Help us find you by giving us a clear street address, including the nearest crossroad. Tell us of any obstacles such as narrow, dead-end or one-way streets etc. Place job site signs prominently.

• Blocks are heavy and a tractor with a full pack weighs about five tonnes. Ensure the ground (including underlying pipes) and any pavement traversed can sustain this weight. Our tractors need at least 2.5 m clear width and 2.6 m height clearance.

• Inspect the delivery and call Austral Masonry™ immediately if there are any problems. Product liability transfers to the purchaser once the units are installed.

Blending

Your bricklayer is a professional tradesman and is responsible for ensuring even colour distribution.

The blending instructions attached to all packs recommend:

1. Don’t mix blocks of different types or qualities (for example, firsts and seconds).

2. Work from at least three open packs of the same block type and quality.

3. Select the top block from a top corner of each pack.

4. Work progressively from a corner down and across each pack in a diagonal pattern. (Don’t remove blocks in horizontal layers.)
WE ARE

Brickworks

Brickworks Building Products is one of Australia’s largest and most diverse building material manufacturers. Under the Brickworks Building Products umbrella are some of Australia’s best known building materials brands. Our products include bricks, pavers, masonry blocks, retaining wall systems, precast concrete panels, concrete and terracotta roof tiles, timber products, terracotta façades and specialised building systems.

With a broad product portfolio and manufacturing and sales facilities across Australia, Brickworks Building Products is uniquely placed to service the demands of the building industry.

With over 1,200 staff across Australia and New Zealand, we pride ourselves on our commitment to product, service excellence and our leadership position.
1. **Stock colours.** Colours other than stock colours are made to order. Contact your nearest Austral Masonry office for your area's stock colours. A surcharge applies to orders less than the set minimum quantity.

2. **Colour and texture variation.** Colour variation can and will occur between product batches despite efforts to ensure extensive efforts to ensure colour consistency. This can be caused by the supply of raw materials can vary over time. In addition, variation can occur between product types and production batches.

3. **Important Notice.** Please consult with your local council for design regulations prior to the construction of your wall. Councils in general require those walls over 0.5m in height and/or where there is loading such as a car or house near the wall be designed and certified by a suitably qualified engineer. **Max wall heights disclaimer.** The gravity wall heights are maximum heights calculated in accordance with CMAA MA-53 Appendix D guidelines and a qualified engineer should confirm the suitability of the product for each application. As such, due consideration must be given to but not limited to: Cohesion. Dry backfill, no ingress of any water into the soil behind the retaining wall. All retaining walls are designed for zero surcharge unless noted otherwise. These walls are intended for structure Classification A walls only as defined in AS4678 Earth Retaining Structures as being where failure would result in minimal damage and/or loss of access.

4. The product images shown in this brochure give a general indication of product colour for your preliminary selection. Austral Masonry recommends all customers see actual product samples at a selection centre prior to making final selections.
