

GUTTER GUARD

never clean your gutters again

ROOF SOLUTIONS

with enduring style

Bristile Roofing® is one of Australia's largest manufacturers and installers of concrete and ceramic roof tiles, metal roofing, fascia gutter, and a vast range of roofing accessories. Offering a collection of contemporary roofing products for the residential and commercial markets, Bristile Roofing is committed to providing whole of roof solutions that meet our customers needs.

Over 85 years, Bristile Roofing® has developed a reputation for product innovation, quality and an unparalleled level of service and expertise which has seen the company rise to prominence as a leader in the industry.

With a range of eye catching roof cladding products available in inspiring colours, unique profiles and creative designs, Bristile Roofing® has a product to suit your style.

BENEFITS

of gutter guard

Roof gutter guard removes the need for gutter cleaning and capture drinking water with confidence. It works by acting as a primary barrier that sits over the gutter preventing leaves and debris from entering gutters in the first place while still allowing water to drain through it with ease.

Made from powder coated steel, roof gutter guard is designed to sit underneath the first row of tiles and to be secured to the gutter at the front using screws to ensure it remains firmly in place. This installation design means that the mesh is secured at an angle so that leaves and debris are blown over the gutter guard to the garden below.

Key benefits of Gutter Guard includes:

Reduced Risk of Overflow

Having the correct gutter guard dramatically reduces the chances of potential flooding of your gutters due to debris build up clogging gutters and downpipes in heavy seasonal rains.

Bushfire Protection

In bush fire areas, roof gutter guard reduces fire risks associated with burning embers entering your gutters and setting alight debris which could set fire to your house.

Strong, Durable and UV Resistant

Because roof gutter guard is made from metal, they are long lasting and will not perish, fade, warp or become brittle due to UV exposure. Metal gutter guards also offer a much better level of fire resistance when compared to plastic gutter guards.

No Gutter Cleaning

Installing roof gutter guard means you will never have to clean your gutter again.

Blocks Debris from Enterring

Stop leaves and debris from clogging gutters.

Removes the Chance of Blockages

Ensure large debris like leaves and sticks don't enter the gutter and clog the gutter or downpipes.

Better Water Capture

Capture water from your roof without large debris and reduce the amount of contaminants in the water captured.

Seals the Gutters and Valleys

Prevents the intrusion of vermin into the roof space through gutters and valleys.

Closes Openings to the Roof Space

Stops birds from entering the roof cavity through the space between the roof lip and gutter.

HOW IT WORKS

never clean your gutters again

Gutter guard links from under your first row of roof tiles to the front of the gutter to create a sloping surface which prevents the intrusion of debris.

Gutter Guard is installed under the first course of tiles and fixed to the front of the gutter.

Gutter Guard forms a physical barrier to prevent leaves and debris from entering gutters.

Gutters are kept from getting blocked, which prevents flooding of eaves, ceiling and wall cavities.

Reduced risk of clogging during hail and flooding rains during storms.

The sloping design of Gutter Guard ensures leaves and debris are blown off the roof whilst water is drawn through the gutter guard into the gutter.
