DESIGNED TO **LAST**

Versatility in design, durability that lasts a lifetime and the highest thermal comfort, with almost no maintenance. Clay bricks and pavers from Austral Bricks tick all the boxes for homes and projects with value and sustainability in mind.

AFFORDABLE VALUE

Cost effective building product materials that increase the value of your investment or project from day one, for generations to come.

LOW MAINTENANCE

No need for paint or other treatments to maintain their aesthetics and durability. They are strong, reliable and relatively maintenance free.

ENERGY EFFICIENT

Combined with intelligent passive building design elements, clay bricks can help moderate building temperatures and reduce energy consumption.

STRENGTH AND SAFETY

Clay products are stronger than concrete and other light weight materials and also provide a safer and more secure home from the outside environment.

NATURALLY SUSTAINABLE

Clay is a natural resource which has been used for centuries because it retains its colour forever as well as its durability. Architects, engineers and specifiers continue to appreciate the advantages of using clay products.

MORTEX

MORTEX is a factory manufactured, quality assured premixed M4 rated mortar solution. Its consistency can save labour time, increase efficiency, remove the need for on site blending, and it is compliant with AS3700:2018. MORTEX takes the guess work out of mortar blending and reduces the potential for under strength, non compliant mortar use.

This can ultimately reduce potential liabilities, saving money and time on rectifications. With the adoption of ISO9001:2008 principles, the mortar constituents are accurately measured and blended in a controlled environment to ensure consistent, homogeneous mortar is produced on-site.

MORTAR COLOUR

White mortar is currently the most popular colour. This is made by mixing light coloured cement and white sand and results in a traditional brick and mortar look. Mortar can be coloured by adding powdered or liquid pigments to the mortar as it is being mixed by the bricklayer. It can also be tinted to

match the brick colour, giving a very even wall colour. Please confirm with your bricklayer what their mortar colouring offering is before making your final decision. For more information on MORTEX, please visit: australbricks.com.au/SA/product/Mortex

MORTAR FINISHES

There are four common mortar finishes and these various finishes result in different shadow lines on the wall. A raked finish will create a deep shadow in the mortar joint. This brings out the horizontal lines of the brickwork (and the vertical lines to a lesser extent) and it is the most common finish. Ironed and struck joints also create shadow lines, but these are much finer and more subtle. A flush joint doesn't allow shadow lines to form at all, giving the wall a flatter, more unified look. Using a mortar colour to match the brick will take this a step further.

EXP = Exposure grade

Suitable for use in external walls exposed to aggressive environments, such as; areas subjected to salts in the soil, adjacent material or ground water, in coastal areas exposed to attack from windborne salt spray, or retaining walls subjected to fertilisers and ground salts.

GP = General purpose

Suitable for internal and external walls only when above a sheet or membrane damp-proof course and protected by an adequate coping, eaves, roof or similar top covering. These units should not be directly exposed to saline environments.

Solar absorptance rating

In the design of energy efficient buildings, architects and consulting engineers need to be able to calculate the heat loss or gain of materials used to construct these buildings.

For this reason, our product range has been categorised into the below three colour groups –

Light (L) < 0.475

Medium (M) 0.475 - 0.70

Dark (D) > 0.70

to assist with their calculations.
