

GB Masonry™

Victoria

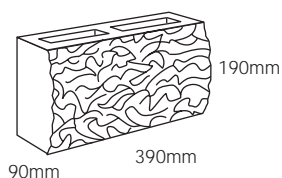

Masonry™ Nature perfected

Widely regarded as Australia's best, the unique range from GB Masonry™ combines the colour and character of natural sandstone with the consistency, strength and durability demanded in modern construction. Their fine surface finish – thanks to a high percentage of white sand – creates a distinctive natural look that perfectly complements traditional and contemporary architectural styles.

1. Heritage Sandstone

Heritage Sandstone combines the character of traditional hand-hewn natural stone with the quality and economy you demand. The authentic rock-face texture echoes the classical grandeur of our historic buildings.

Brisbane Blend

A subtle combination of three natural colours: off white, gold and pink/orange.

Endeavour Blend

The lightest blend, combining a white background with soft yellow highlights.

Limestone Blend

The light, sandy colour recreates the distinctive appearance of natural limestone.

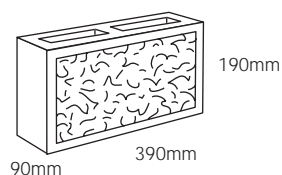

Sydney Blend

The cream base of this two-colour blend is subtly accented with gold.

2. Frame Series

Picture perfect, that's the Frame Series. These distinctive masonry units combine the hand-hewn finish of our Heritage Sandstone series with the formality of a unique frame-like bevelled edge.

Endeavour Blend

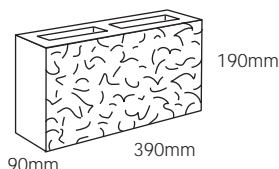

Limestone Blend

Sydney Blend

3. Sandblend Series

The Sandblend Series will bring the natural appeal of our endless coastline to your new home. The lightly textured surface is ideal for contemporary architectural designs, either on their own or complementing other premium walling materials.

Brisbane Blend

Limestone Blend

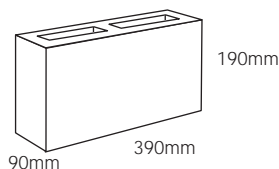

Endeavour Blend

Sydney Blend

4. Smooth Series

GB Masonry's Smooth Series look great on their own or as an accent to our textured face units, for example in quoins (corners). Colour match or contrast, the creative choice is yours.

Building with GB

Pack size: 150 units (Heritage Sandstone, Frame Series, Sandblend Series);
180 units (Smooth Series)

Units/m²: 12.5

Weight/unit: 11.1 kg

Face finish: Imperfections may occur on the inner face of concrete masonry. GB Masonry

units are provided with a single face finish. It is the blocklayer's responsibility to ensure the correct face is displayed in the wall.

Colour variation: The images in this brochure are for general information only. Please view current product samples before making a final selection.

Blending: On-site blending (mixing across multiple packs) is essential for uniform colour distribution across the overall wall. See instructions on the pack.

Cleaning: Care must be taken when cleaning blockwork, especially if hydrochloric acid is being used.

Sealing: We recommend that all units be finished with a penetrating masonry sealer.

Fractions and accessories: Available to order ex-Queensland.

Other block sizes: 200 mm and 150 mm units are available to order ex-Queensland in all series.
