A REPUTATION FOR QUALITY

Product – Hawthorn | London
Architect – Cumulus.Studio | Photography – Anjie Blair

A Legacy in Brick

The story of Daniel Robertson begins in 1853 when John Robertson imported Welsh roofing slates as ballast in sailing ships into Melbourne.

He was soon providing all forms of roofing, including terracotta tiles, across his newly adopted hometown and in 1910 the company commenced its first manufacturing venture producing concrete roof tiles in Whiteman Street, South Melbourne.

To this day, many of Melbourne's most notable buildings still feature those original, Daniel Robertson roofs. But it wasn't until 1928 that the company sealed its reputation for quality craftsmanship after acquiring Tunstall Brickworks in Nunawading and converting it for the production of terracotta tiles.

The transition to red clay products proved extremely successful and business grew rapidly. By 1967 the company was a leader in the field, researching and developing new colours, shapes and textures.

In that same year, it launched a unique range of rustic bricks as an alternative to the smooth-faced options only available at the time. They were an instant hit.

Demand for this new product soon became so great that roof tile production was phased out within two years to focus on manufacturing bricks.

In 2012 Australia's largest building products manufacturer Brickworks Building Products group acquired the company. Under this well respected banner, Daniel Robertson continues to deliver excellence and innovation in architectural brickwork.

There are simply no better premium quality bricks available today.

Unique Character and Style

—
In a world of mass production, these crafted clay bricks are highly valued for their unique character, earthy appeal and individual charm. Developed through years of tradition, they are kiln fired to produce bricks which have distinctive colour and textural variations.

Sustainable and Carbon Neutral

Daniel Robertson bricks made in Tasmania have achieved the enviable goal of Carbon Neutral certification under the Australian Government’s National Carbon Offset Standard.

This feat has been largely achieved by using biofuel as the main firing fuel for our kilns at our Longford plant. Thermal mass, energy-efficient design, reusability, and the fact that bricks do not require resource-hungry finishes such as paint or render to maintain their good looks and durability, all add to our sustainability credentials.

Certified by Climate Active
Sustainability is important to us and we are committed to being concerned for and respecting the environment. Daniel Robertson bricks are certified carbon neutral which means that they have no net impact on the climate.

We are taking responsibility for our emissions through energy efficient production methods and investing in reforestation and renewable energy projects. Visit climateactive.org.au for more information about our carbon neutral certification.

Designed to Last

Versatile in design, durability to last a lifetime, the highest thermal comfort and with low maintenance upkeep, clay bricks tick all the boxes for homes and projects with value and sustainability in mind.

1.

Low maintenance
No need to paint or other treatments to maintain their aesthetics and durability. They are strong, reliable and relatively maintenance free.
2.

Affordable
Cost effective building product materials that increase the value of your investment or project from day one, for generations to come.
3.

Energy efficient
Combined with intelligent passive building design elements, clay bricks can help moderate building temperatures and reduce energy consumption.
4.

Strength and safety
Clay products are stronger than other light weight materials and also provide a safer and more secure home from the outside environment.
5.

Naturally sustainable
Clay is a natural resource which has been used for centuries because it retains its colour forever as well as its durability. Architects, engineers and specifiers continue to appreciate the advantages of using clay products.
6.

Peace of mind guaranteed
Daniel Robertson bricks are backed by an exclusive Brickworks 100 year product warranty.

New Arrivals

– Overland

1

Overland

Just like the magnificent wide-ranging beauty of Tasmania, each brick has been created so each double-face is inherently unique in colour and form, but with an extraordinarily natural ‘reclaimed’ feel. Much the same as the weathered landscapes that inspired this collection, these bricks will delight for generations to come.

Mortex

Mortex is a factory manufactured, quality assured premixed M4 rated mortar solution. Its consistency can save labour time, increase efficiency, remove the need for on site blending, and it is compliant with AS3700:2018. Mortex takes the guess work out of mortar blending and reduces the potential for under strength, non compliant mortar use.

Recommended Mortar Finishes

There are four common mortar finishes and these various finishes result in different shadow lines on the wall. A raked finish will create a deep shadow in the mortar joint. This brings out the horizontal lines of the brickwork (and the vertical lines to a lesser extent) and it is the most common finish. Ironed and struck joints also create shadow lines, but these are much finer and more subtle. A flush joint doesn't allow shadow lines to form at all, giving the wall a flatter, more unified look. Using a mortar colour to match the brick will take this a step further.

Ironed

Struck

Flush

Mortar Colours

White mortar is currently the most popular colour. This is made by mixing light coloured cement and white sand and results in a traditional brick and mortar look. Mortar can be coloured by adding powdered or liquid pigments to the mortar as it is being mixed by the bricklayer. It can also be tinted to match the brick colour, giving a very even wall colour. Please confirm with your bricklayer what their mortar colouring offering is before making your final decision.

Grey Blend	GP	D	Yes*	 Tan	230L x 110W x 76H 230L x 110W x 50H

EXP = Exposure grade

Suitable for use in external walls exposed to aggressive environments, such as; areas subjected to salts in the soil, adjacent material or ground water, in coastal areas exposed to attack from windborne salt spray, or retaining walls subjected to fertilisers and ground salts.

GP = General purpose

Suitable for internal and external walls only when above a sheet or membrane damp-proof course and protected by an adequate coping, eaves, roof or similar top covering. These units should not be directly exposed to saline environments.

Solar absorptance rating

In the design of energy efficient buildings, architects and consulting engineers need to be able to calculate the heat loss or gain of materials used to construct these buildings.

For this reason, our product range has been categorised into the below three colour groups:

Light (L) < 0.475
Medium (M) 0.475 - 0.70
Dark (D) > 0.70
